SUMMARY

DevOps Engineer with 2.5+ years of production experience specializing in cloud-native deployments, infrastructure automation, and CI/CD. Hands-on expertise in **AWS, Kubernetes, Docker, Jenkins, ArgoCD, and Ansible** for building scalable, secure, and highly available systems. Strong in automating infrastructure, managing containerized workloads, and implementing GitOps and monitoring solutions. Proven ability to reduce manual effort, improve deployment efficiency, and ensure zero-downtime releases.

SKILLS

DevOps & Automation: Jenkins, Docker, Kubernetes, Ansible, CI/CD Pipelines , ArgoCD

Cloud Platforms: AWS (EKS, EC2, ECR, VPC, S3, Lambda, CloudFormation, Route 53, ALB, Fargate)

Monitoring: Prometheus, Grafana

Scripting & Programming: Shell Scripting, Python, Java

Web & Database: NGINX, MySQL

Tools & Systems: Git, Linux Administration, Docker Registry

EXPERIENCE

DevOps Engineer / Software Development Engineer II

JPL (Jio Platforms limited) | Sep 2023 – Present

- Designed and implemented production-grade CI/CD pipelines using Jenkins, reducing manual deployment effort by 70% and improving release efficiency by 80%.
- Integrated Ansible into CI/CD pipelines to automate remote server provisioning, configuration management, application deployment, Docker installation, and Kubernetes environment setup.
- Provisioned and maintained remote Linux servers using Ansible playbooks, ensuring configuration consistency and eliminating configuration drift across environments.
- Automated Docker-based application deployments and container lifecycle management on remote infrastructure.
- Built and deployed containerized Django applications using Docker and NGINX with rolling updates and zero-downtime deployment strategies.
- Designed scalable AWS cloud architectures using EC2, VPC, S3, ECR, and IAM with high availability considerations.
- Deployed and managed Kubernetes workloads on AWS EKS, implementing rolling deployments, multi-AZ configurations, and ALB-based load balancing.
- Configured dynamic Jenkins agents running as Docker containers to optimize build environments and reduce dependency on heavy virtual machines.
- Implemented monitoring solutions using Prometheus and Grafana to track system performance and application metrics.

PROJECTS

AWS EKS CI/CD Pipeline with Jenkins & Kubernetes (Multi-AZ)

- Built a production-grade CI/CD pipeline using Jenkins integrated with AWS EKS, automating Docker image build and push to ECR.
- Designed a multi-AZ Kubernetes deployment with AWS ALB, enabling scalable, highly available, zero-downtime releases.

GitOps CI/CD Platform with Kubernetes Auto-Scaling & Observability

- Implemented GitOps-based deployments using ArgoCD for automated, self-healing application delivery from Git.
- Integrated Kubernetes HPA with Prometheus and Grafana for auto-scaling, monitoring, and real-time observability.

EDUCATION

Bachelor of electronics and communication Engineering

University BDT College of Engineering | Aug 2019 - May 2023 | 8.02 CGPA
